Profile

A Master's student in Robotics, Autonomous and Intelligent Systems, passionate about building intelligent full-stack applications, autonomous systems. Combines strong foundations in software engineering, AI, and computer science with hands-on experience in modern web technologies, cloud deployment, and machine learning. Seeking opportunities to develop innovative solutions at the intersection of software and autonomous systems.

Software skills

- Languages: Python, JavaScript/TypeScript, C++, C#, SQL
- Frontend: React.js, Next.js, React Native, Tailwind CSS
- Backend: Node.js, Express.js, RESTful APIs
- Databases: PostgreSQL, MySQL, MongoDB
- AI/ML & Data Science: TensorFlow, PyTorch, Pandas, NLP, Computer Vision
- DevOps & Tools: Docker, AWS (EC2), Git, CI/CD, Jest/Mocha, Cypress, Agile/Scrum

Projects

AI-Powered Media Editor | Personal Project | Dec 2023 – Jan 2024

- Developed a full-stack generative AI application using Next.js and TypeScript that allows users to edit photos and videos through natural language prompts.
- Engineered a secure and efficient token management system for AI API calls, optimizing cost and performance.

Patient Records Management System | Software Engineering Project | Sep 2023 – Nov 2023

- Built a secure, containerized web application using the PERN stack (PostgreSQL, Express.js, React, Node.js) with TypeScript.
- Implemented core features for healthcare staff to manage patient data, appointments, and prescriptions.
- Deployed the application on AWS EC2 using a multi-container Docker setup, ensuring scalability and easy deployment.

Vehicle Detection & Tracking System | Computer Vision Project | Feb 2023

- Created a Python application using OpenCV and object detection models to identify and track moving vehicles from static CCTV footage. Focused on improving tracking accuracy in varied lighting and traffic conditions.

DJ Mixer Desktop Application | C++ Project | Sep 2022 – Dec 2022

- Designed and built an audio processing desktop application in C++ utilizing the JUCE framework to manipulate and mix audio files in real-time.

Education

- EIT Digital Master School – M.Sc. in Autonomous Systems and Intelligent Robots University of Trento & Aalto University | June 2027
 - Relevant Coursework: Robotic Perception and Action, Autonomous Robots, Computer Vision, Deep Learning, AI, Control and Automation, modelling
- Goldsmiths, University of London – B.Sc. in Computer Science | Graduated May 2024
 - Relevant Coursework: Data Science, Algorithms, Artificial Intelligence, Machine learning, Software Engineering and design, Information Security.

Work Experience

- Freelancer | Helsinki, Finland (Remote) | Oct 2022 – Present
